

Training Manual (SW Down Load)

소속 [Department] : Display Division/Display Research Lab.

작성자 [Creator] : 연구3실 SW2 Gr.

❑ The reason of software download

: Software update is needed for the reason of correcting software bugs after the mass production.

❑ Software download file (Extension type of download file is only XXX.epk)

1. Application file : app_**modelname**.epk (ex> app_50PY2DR-UA.epk)
2. Autodemo file : autodemo_**modelname**.epk (ex> autodemo_50PY2DR-UA.epk)

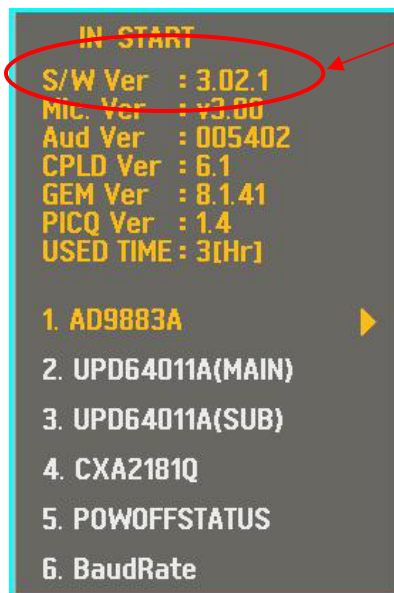

❑ Download Method

1. RS 232C
2. EPF Mode
3. OAD

❑ Identify the software download Success or Fail

1. IN START Menu

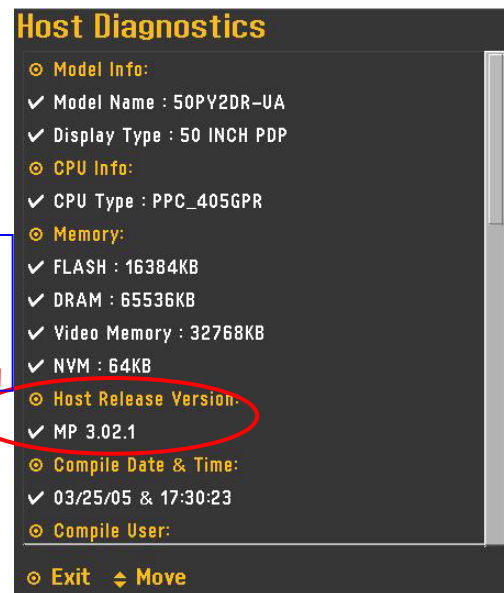

: Press the "IN-START" button of Factory R/C

SW version

2. Host Diagnostics Menu

: Press the "0" button of R/C three times consecutively when the CABLE item of Menu is highlighted

❑ PDP PVR/EPF DCR Model

- 50PY2DR-UA : P/W → 50PY2DR-UA
- 60PY2DR-UA : P/W → 60PY2DR-UA
- 50PX4DR-UA : P/W → 50PX4DR-UA

❑ PDP DCR Model

- 42PX2D-UC : P/W → 42PX2D
- 50PX1D-UC : P/W → 50PX1D

❑ PDP EPF DCR Model

- 42PX4D-UB : P/W → 42PX4D
- 42PX5D-UB : P/W → 42PX5D
- 50PX1D-UB : P/W → 50PX1D

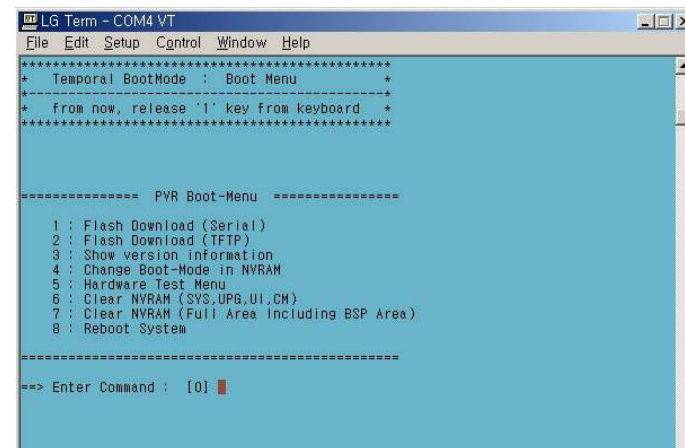

❑ LCD DCR Model

- 26LX1D-UA : P/W → 26LX1DU
- 32LX1D-UA : P/W → 32LX1DU
- 26LX2D-UA : P/W → 26LX2DU
- 32LX2D-UA : P/W → 32LX2DU
- 32LP1D-UA : P/W → 32LP1DU
- 37LP1D-UA : P/W → 37LP1DU
- 42LP1D-UA : P/W → 42LP1DU

- ❑ Connect the TV Set that is needed to the software update with the computer which contains the update file through the RS-232C cable and do the following things below for software download.

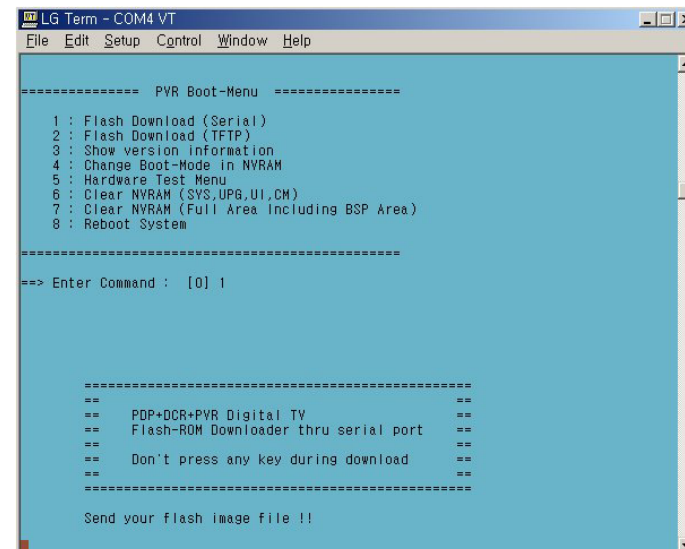

1. Execute the **LG Terminal** or **DTVlap Terminal** program.

2. On pressing the '**1**' button, reboot the TV system, then you can enter the Boot Menu phase like <Fig. 1>

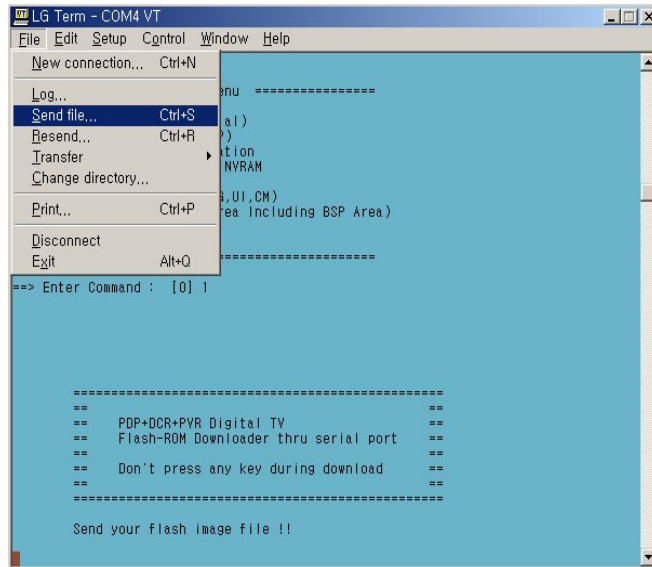

<Fig. 1>

3. Like in <Fig.2>, press the '**1**' button and execute the **Flash Download (Serial)** menu

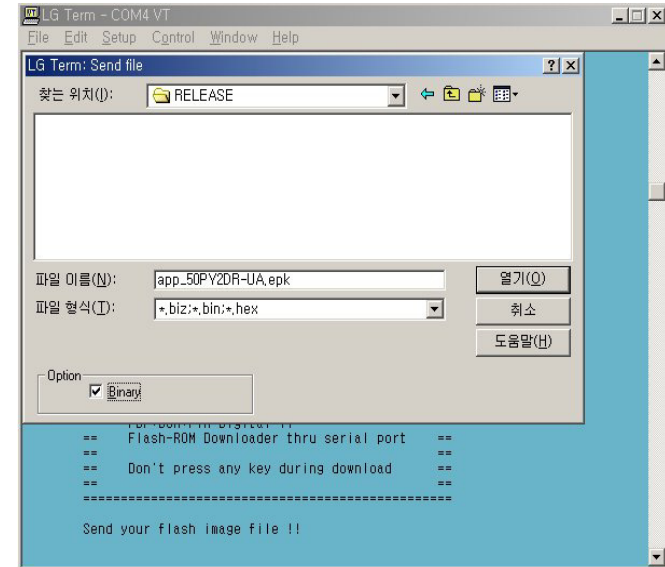

<Fig. 2>

3. Execute the 'File->Send file...' menu, then select the file that you'd like to update.

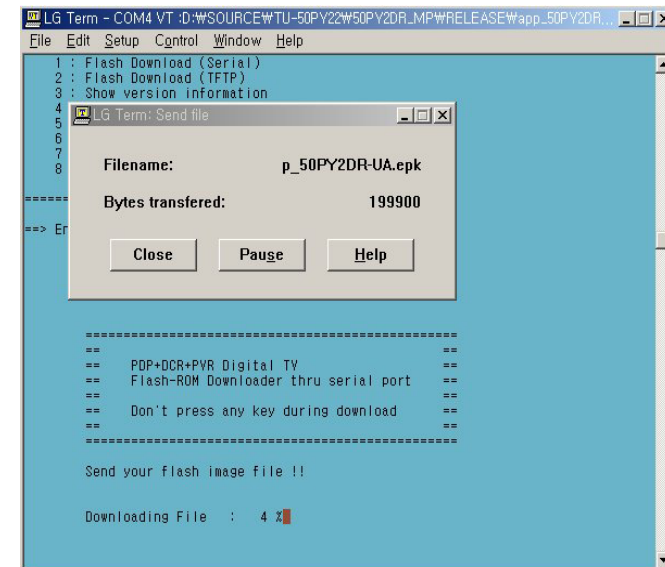

<Fig. 3>

<Fig. 4>

4. You can see that software update data are downloaded like <Fig. 5>.

<Fig. 5>

5. If the download is completed, the TV set erases flash.
And then it writes the unpacked image to flash(programming flash).

<Fig. 6>

```

❑ OAD is the method which updates the TV software that TV sets receive from PSIP of the specific DTV channel.

1. Press **ADJ** button in the factory remote controller, then you can see the Ez-Adjust menu.

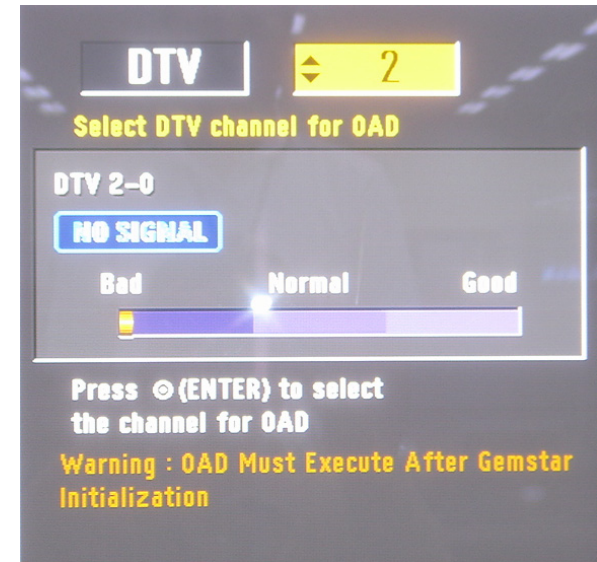

- Select OnAirDownload using **ARROW** key button.

Ez Adjust

1. Gemstar Test
2. Cable Check
3. AutoDemo Copy
4. AD9883A-Set
5. Video(UPD)-Set
6. Sub-Brightness/Contrast
7. White-Balance
8. Module Control
9. Temperature Threshold
10. White-Pattern
11. Auto Guide On/Off
12. 2 Hour Off Option
13. OnAirDownload ▶
14. Guide Reset

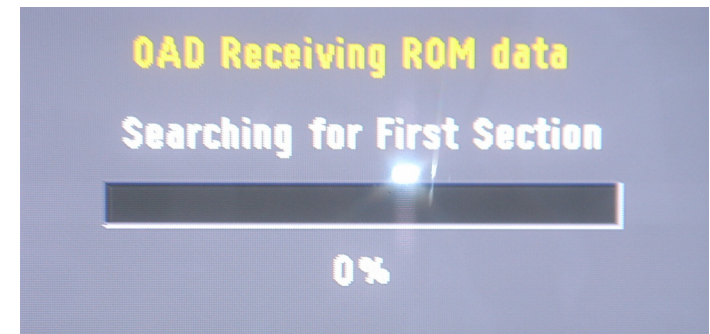

2. Select the special DTV channel for OAD and press **ENTER** button.

- You can see the signal strength is strong.

3. If TV sets begin to receive OAD data, the bar is proceeded.

- You can see the percentage number is grown up.

4. If the download is completed, you can see the message of “Unpacking and Writing Flash with OAD ROM Data....” In this state, the TV set is unpacking the downloaded files and writing the special flash rom.
- If the work of unpacking and writing flash rom is completed, the TV set is rebooted by itself. The rebooted TV set has the updated software.
 - Warning : Don't turn off your system in progress unpacking and writing flash rom.
